

Junxian (Charles) Li

Software Engineer | Full Stack, Backend & AI Infrastructure

Jersey City, NJ • ljxcswork@gmail.com • (587) 937-6233

Technical Skills

Languages & Frontend: JavaScript, TypeScript, Python, Java, SQL, HTML/CSS, React, Redux, React Router, Ant Design, Vite

Backend & Data: Node.js, Express, REST APIs, Swagger/OpenAPI, OAuth 2.0, JWT, RBAC, Microservices, MongoDB, PostgreSQL, Redis

Cloud, DevOps & AI: AWS Cognito, API Gateway, Lambda, ECS, ECR, S3, SQS, CloudFront, Docker, CI/CD, MCP, RAG, AI Data Gateways

Experience

MenuSifu Inc.

Full Stack Engineer

New York, NY

Mar 2025 – Present

- Built and scaled a **unified identity platform** with MFA, OAuth 2.0, JWT validation, token refresh, passkey readiness, and IP-risk controls for **10M+ users** and **10K+ requests/min**; centralized Cognito operations behind backend APIs and reduced authentication latency by **40%**.
- Led the design of a secure **enterprise MCP and AI Data Gateway**, establishing company-controlled authentication, delegated authorization, governed data access, and end-to-end auditing for external AI clients without exposing internal databases.
- Delivered **React/Redux and Node.js/Express** features for CRM, employee access, merchant operations, authentication, internal dashboards, and AI voice-agent subscriptions; built REST/OpenAPI services with RBAC, merchant/business scoping, MongoDB, and PostgreSQL integrations supporting **1M+ monthly call records**.
- Migrated **11.2M+ user profiles** through a production-safe tokenization backfill using batching, throttling, checkpointing, retries, validation, and duplicate handling; identified **10K+ invalid phone** and **5.7K+ invalid email** records.

Kordova Tek

Software Engineer

Vancouver, BC

Oct 2024 – Feb 2025

- Built **React and Node.js applications** for truck-driver onboarding and government-housing workflows, connecting applicant intake, eligibility Q&A, document review, policy retrieval, and structured case summaries through MCP-style tools with role-based access, consent controls, and audit logs.
- Designed **document-processing pipelines** with chunking, retrieval, caching, prompt templates, and reusable summaries for repeated reviews of **60–70-page documents**, targeting **50%–70% lower token cost** in pilot workflows.

Whaler Technologies Inc.

Software Engineer

Remote

Sep 2023 – Sep 2024

- Built a **full-stack AI advisor platform** for **1K+ client profiles**, automating segmentation, outreach drafts, portfolio-review preparation, meeting summaries, scheduling, CRM updates, and advisor-approved follow-ups.
- Implemented **RAG, structured outputs, PII masking, RBAC, and human approval**; pilot evaluations reached **90%+ intent accuracy** and **85%+ retrieval relevance** and supported an estimated **15% monthly client-maintenance revenue lift**.

Selected Architecture Project

Enterprise MCP, AI Data Gateway & Authorization Platform

MenuSifu | 2026

- Designed an end-to-end **full-stack AI integration** from ChatGPT, Claude, and Codex clients through a Node.js MCP service and AI Data Gateway to MongoDB, PostgreSQL, and internal APIs, using **OAuth 2.0/PKCE** and short-lived delegated tokens scoped by user, client, audience, and merchant/business permissions.
- Mapped MCP tools and REST operations to **API Gateway authorization policies** with dynamic path, header, and query conditions, wildcard resources, chain-level merchant checks, schema validation, and PII-aware response filtering.
- Defined a quantified **Version 1 pilot scope** for **2 external AI clients**—Codex and Claude Code—with read-only cloud-report tools, one MCP audience, business-scope enforcement, and short-lived access and refresh tokens; established initial safeguards of **60 requests/user/min**, **3 concurrent reads/user**, and **30 global concurrent reads**.

Education

Seattle University, Graduate Degree in Computer Science

Seattle, WA | 2024

University of Alberta, Bachelor's Degree in Engineering

Edmonton, AB | 2022
