

Junxian (Charles) Li
Software Engineer | Platform & Backend Systems
Jersey City, NJ • ljxcswork@gmail.com • (587) 937-6233

Education

Seattle University Computer Science (Graduated Degree)	Seattle, WA 2024
University of Alberta Engineering (Bachelor)	Edmonton, AB 2022

Work Experience

MenuSifu Inc. Software Engineer	New York, NY Mar 2025 – Present
--	------------------------------------

- Built and owned a unified authentication platform supporting MFA, passkey, and IP-based login for a 10M+ user base, with an estimate of roughly 10% active users, peak traffic exceeding 10k+ requests per minute.
- Designed enterprise authentication and authorization framework, including OpenAPI access control, role-based permissions, and delegated access (Assume Role) for secure client-level data inspection.
- Led platform security design, implementing user data protection, encryption, and controlled access mechanisms to reduce unauthorized access risks.
- Drove backend system evolution and internal platform development, covering employee management, CRM systems, and operational tools, improving system stability and reducing authentication latency by 40%.

Kordova Tek Software Engineer	Remote Oct 2024 – Feb 2025
--	-------------------------------

- Built B2B products across backend services and frontend applications for internal and client-facing workflows.
- Developed ChatGPT-powered AI agents for track driver onboarding, and government housing application.
- Built AI-driven workflows for document analysis, summarization, and decision support to reduce manual effort.
- Delivered scalable business tools and automation that improved usability and operational efficiency.

Whaler Technologies Inc. Software Engineer	Remote Sep 2023 – Sep 2024
---	-------------------------------

- Designed backend systems supporting enterprise business operations and cross-platform integrations.
- Built data integration flows between internal systems and external services to ensure consistency and reliability.
- Improved system performance and stability through backend optimization and data management improvements.

Projects

Enterprise Authentication & Identity Platform (MenuSifu)

- Built a centralized authentication system supporting MFA, passkey, and IP-based login across multiple business platforms.
- Designed OpenAPI authentication and enterprise authorization model, enabling secure access control for internal and external systems.
- Implemented delegated access (Assume Role) mechanisms to allow temporary, controlled client-level permission usage for support and data inspection.
- Supported high-concurrency authentication traffic (10k+ requests/min) while maintaining secure and consistent identity verification.

Platform Security & Data Protection Framework (MenuSifu)

- Led design of platform-level data protection, including user data encryption and secure handling of sensitive information.
- Centralized authentication and authorization flows to enforce consistent access control across services.
- Managed database evolution and data consistency strategies to support large-scale business growth.
- Improved system reliability and reduced risk through secure data access patterns and backend restructuring.

Skills

Languages: JavaScript, TypeScript, SQL, HTML, CSS/SCSS

Frameworks Platforms: React, Redux, Redux Toolkit, React Router, Node.js, Express, REST APIs, OAuth 2.0, Authentication Authorization, Swagger/OpenAPI, Microservices, MongoDB, Mongoose, PostgreSQL, AWS Amplify
Cloud, DevOps & Tooling: AWS (Cognito, Lambda, ECS, ECR, S3), Docker, Bitbucket Pipelines, CI/CD, Vite, Webpack, Nx, Ant Design, i18next, Jest, Mocha, Chai, Vitest, Cypress, Axios, PDFKit
